On 5/30/04 I was traveling through St. Louis and there was severe weather so I turned it to the local traffic and weather in St. Louis on my XM radio and there I learned about a tornado in the St. Louis area. XM has been very dependable weather wise. The NAB has allowed South Texas to be taken over by the Spanish speaking radio stations, if you were going to listen to the weather there who is going to translate it? If the television and radio were doing their jobs we wouldn't have come to rely on XM radio completely, but since they do an excellent job who can blame us? And why try to punish them for giving the public what they really want and need. Please allow them to continue their weather and traffic for the safety of the motoring public. Please oppose HR 4026 and 04-160. Thank You!
